

Quality & Sustainability Policy

We are open to change, innovation and sustainability.

Our products serve to extend the durability of surfaces and thus protect them from restrictions in use. In this way, we help to save resources generated during production and disposal, because the more durable a product is, the less frequently it needs to be replaced.

We offer our customers excellent quality and protect our social and ecological environment.

In the manufacture and use of our products, we constantly strive to reduce the environmental impact and health risks through innovation. The main aim here is to constantly reduce the physical strain and the use of materials, energy and water during use.

We want to continuously improve in everything we do.

Through the continuous search for innovations and improvements to products, processes and the management system, we try to meet and exceed the requirements of our stakeholders.

We feel responsible for our actions as well as for compliance.

We observe our responsibility in all decisions and comply with the binding requirements and relevant legal requirements. In doing so, we would like to act as a role model.

We treat our employees, customers, suppliers and other stakeholders as partners.

We communicate our environmental aspects and our environmental goals to our stakeholders. We enter into an exchange with them, motivate them to act in an environmentally conscious manner and involve them in finding and implementing solutions.

Our policy is based on the values of our strategy
