Experience digital intelligence in powder coating

Dear ladies and gentlemen,

automatically controlled powder quantities, constant layer thicknesses and less powder consumption - sounds too good to be true? **With Flowsense, this is now possible:** The smart system constantly monitors the powder flow and adjusts it to the target value. The powder quantity is continuously adjusted and deviations are automatically corrected.

We will show you Flowsense live - at the PaintExpo!
Hall 3, booth 3330

POWDER COATING

How Shoemaker optimized the production of geometrically complex parts

The US company Shoemaker, a manufacturer of air diffusers and heating registers, installed an **E-Line powder system to significantly reduce the color change time**. The result: personnel required for reworking was reduced by 90% per shift and production increased by up to 30%.

LIQUID COATING

These are the advantages of industrial liquid coating

For **high-quality surfaces with an excellent gloss level**, liquid coating is the first choice for almost all substrates. Thanks to the large selection of suitable materials and a wide range of colors, including metallic, high-gloss and effect paints, there are virtually no limits to the customization of surfaces. **Explore our large product portfolio!**
