

### Why our IoT platform brings you even more benefits now

Dear ladies and gentlemen,

the information and management platform COATIFY offers you secure access to the production data of your WAGNER powder coating system from anywhere in the world and at all times.

The platform now offers **several new functions**, so you can optimize your coating processes in an even more targeted way - such as the detailed tracking of past coating jobs, including recipe and parameter settings. In addition to the complete package, there is also an attractive basic version available called COATIFY.light.

#### LIQUID COATING

### How to apply water-based coatings efficiently & safely

The TOPFINISH Bell 1S and RobotBell 1 high-speed rotation atomizers are equally well suited as all-round units for water- and solvent-based coatings. Both models are now also available as variants with external charging, especially for use with water-based coatings. This not only gives you efficient results, but can also reduce system costs for water-based coating applications.

#### LSR PROCESSING

### 3 good reasons for the LSR eTwin Connect

Reinhardt-Technik presents the new generation of dosing and mixing systems for liquid silicone rubber: With an extremely precise mixing accuracy and material utilization of up to 99.75%, the LSR eTwin Connect meets all requirements of modern LSR processing. It also enables machine-to-machine communication.
